SHEPHERD CONNECT

User Acceptance Testing (UAT) Issue & Resolution Status Review

Developer Review Pack | Evidence period: 28 July – 13 September 2026

Purpose. This report consolidates issues and observations raised during the Shepherd Connect / JC App onboarding and classroom UAT discussions, with emphasis on the character of each issue, likely root cause, resolution level, workaround and outstanding technical review required.

Important qualification: The log deliberately distinguishes confirmed application defects from data/configuration problems, administrative/process issues, network/environmental issues and device/platform compatibility concerns. Where the chat does not establish a root cause, the report records it as *unconfirmed* rather than presenting an assumption as fact.

Code	Meaning
R1	Resolved – evidence indicates successful correction/operation.
R2	Workaround – user can proceed, but underlying issue may remain.
R3	Partially resolved / recurring – mitigation or fix exists, but issue was not conclusively eliminated.
R4	Unresolved / technical investigation required.
R5	Process / configuration / administrative issue rather than a confirmed software defect.
R6	User / device / network / environmental issue; application root cause not established.

1. Consolidated UAT Issue & Resolution Log

ID	Date	Issue / Observation	Character / Likely Root Cause	Resolution / Action	Level
UAT-01	28 Jul	OTP expired before onboarding completed.	OTP validity window was initially 10 minutes; operationally short for some users.	Validity subsequently increased to 20 minutes.	R1
UAT-02	28–30 Jul	Some users did not receive OTP by SMS/WhatsApp/email.	Delivery/backend/email-routing issue; one case could not be found on sender platform.	OTP resent; email checked; spam advised; backend reviewed.	R3
UAT-03	28 Jul	Users were unsure how to begin onboarding.	Onboarding instructions/process were not sufficiently self-explanatory.	Step-by-step registration guidance supplied.	R1/R5
UAT-04	28 Jul	“Registration failed” despite details being entered.	Confirmed duplicate/existing registration; backend returned 409 Conflict.	Existing registration identified; user directed to sign in.	R1
UAT-05	28 Jul onward	Users remained “Awaiting Approval”.	Administrative approval workflow, not registration failure.	Admin approval performed.	R5
UAT-06	28 Jul	Registration/profile matching problems linked to email format.	Email case sensitivity / identity matching issue.	Correct email casing used; duplicate profiles flagged for deletion.	R2
UAT-07	28 Jul	Uncertainty about whether registration required an enrolled child.	Possible eligibility/business-rule or profile-model issue; no definitive diagnosis recorded.	Raised for review.	R4
UAT-08	29–30 Jul	Teachers logged in but were not assigned to a class.	Teacher/class assignment data or configuration; expected assignment model was unclear.	Admin/backend intervention; central assignment proposed.	R3/R5
UAT-09	29–30 Jul	Some users appeared to have no class.	Some were administrative/support personnel rather than classroom teachers.	Role distinction clarified; admin profile appropriate.	R5
UAT-10	30 Jul	Class selection returned “Fail, try again”.	Case-dependent; backend registration conflict identified in at least one case; app state/version also considered.	App update/retry and individual backend investigation.	R3
UAT-11	30 Jul	Duplicate teacher records with same name/phone but different emails.	Data duplication / identity matching problem.	Duplicate profiles identified; deletion requested.	R2/R5
UAT-12	30 Jul	OTP/email still absent after waiting.	In at least one case email was not located on sender platform; delivery/backend state unclear.	Email/spam checked; OTP resent; some users later approved.	R3
UAT-13	30 Jul	Registration blocked despite apparently correct phone number.	Phone-number validation/format issue was suspected; root cause not confirmed.	Screenshot reviewed; retry advised.	R4/R6
UAT-14	30 Jul	Parent + teacher role created uncertainty; one role worked while the other did not.	Multiple-role/profile architecture or configuration.	Dual profiling requested; workaround discussed.	R3/R5
UAT-15	2 Aug	Difficulty joining onboarding Zoom.	Internet/network connectivity, external to the App.	Network/provider switched; user eventually joined.	R6
UAT-16	9 Aug	Some users still had not completed onboarding.	Adoption/process completion rather than confirmed software defect.	Users prompted and assisted.	R5
UAT-17	9 Aug	Logged in but “not assigned to a class today”.	Role/class assignment configuration; some users were administrative personnel.	Role/use case clarified.	R5
UAT-18	9 Aug	User wanted both parent and teacher profiles; only teacher login worked.	Multiple-role account configuration issue.	Dual-role request raised; no final technical closure documented.	R4/R5
UAT-19	16 Aug	Check-in/check-out required barcode scanning.	Defined operating procedure requiring camera permission and correct service barcode.	Guide issued; camera permission/refresh advised if needed.	R1/R5
UAT-20	23 Aug	Clock-in failed/repeatedly delayed.	Performance/latency concern; successful retry eventually occurred.	Refresh/update prompted; eventually successful.	R3
UAT-21	23 Aug	Service Attendance appeared more reliable than Clock-in.	Possible UI/workflow or backend performance inconsistency; not technically confirmed.	Observation raised; no confirmed fix recorded.	R4
UAT-22	29 Aug	App update reportedly corrected prior week’s issues.	Evidence of software release/fix deployment, but exact defect list not fully documented.	Users instructed to update app.	R1/R3
UAT-23	13 Sep	TV connected but YouTube/video would not play.	Device/browser/media integration or compatibility issue; root cause not confirmed.	Alternative phone/display route discussed; some failures remained.	R4
UAT-24	13 Sep	Could not select a file; “function not supported”.	Strong indication of device/browser/OS capability limitation.	No confirmed resolution documented.	R4/R6
UAT-25	13 Sep	TV disconnected when phone connected, and vice versa.	Possible device pairing/session conflict.	No confirmed resolution documented.	R4
UAT-26	13 Sep	Manual video URL entry still did not enable playback.	Suggests issue beyond user procedure: URL handling/media integration/device compatibility possible.	Examples/screenshots shared; no confirmed resolution.	R4
UAT-27	13 Sep	Some teachers could not get TV/display experience working.	Device-specific compatibility/configuration differences; later reports point to OS/version differences.	Individual assistance attempted; no universal resolution.	R4

ID	Date	Issue / Observation	Character / Likely Root Cause	Resolution / Action	Level
UAT-28	13 Sep	Camera issue reported by teachers.	Camera permission/device compatibility possible; evidence insufficient to establish root cause.	Permission check/guide; no confirmed technical closure.	R4/R6
UAT-29	13 Sep	Intermittent internet caused re-login on phone.	Network interruption is environmental; repeated authentication indicates session-persistence behaviour.	Teacher re-signed in and continued.	R2
UAT-30	13 Sep	Hyelhirra drop-off notification covered part of teaching slide and was difficult to dismiss.	Notification/UI interaction issue; operational alert interfered with primary teaching interface.	Dismissed with difficulty; teacher-menu control/overlay behaviour needs review.	R4

2. Current UAT Position – 13 September 2026

The evidence indicates a transition from an initial **onboarding and registration problem set** into a more important **cross-device reliability and classroom usability problem set**. The basic teaching workflow has now been demonstrated successfully, but the experience is not yet uniform across all classrooms and devices.

Area	Current status	Developer interpretation
Basic teacher onboarding	Largely operational	Initial OTP/registration/approval problems have substantially reduced; edge cases remain.
OTP	Improved but historically recurring	Review delivery reliability and identity/profile matching if recurrence continues.
Registration	Largely operational	Duplicate profiles and case-sensitive identity matching remain data/design concerns.
Class assignment	Operational but configuration-sensitive	Separate role, assignment and approval issues from genuine application defects.
Check-in / check-out	Operational; historical latency	Clock-in reliability/performance should be distinguished from barcode workflow.
Lesson slide projection	Demonstrated successfully	Core teaching presentation workflow is working in a successful device configuration.
TV connectivity	Not uniformly resolved	Requires defined supported-device/OS matrix and reproducible test cases.
Video / YouTube playback	Unresolved for some users	Investigate media integration, browser/device capability and URL handling.
File selection	Compatibility issue unresolved	“Function not supported” strongly warrants device/OS compatibility testing.
Camera	Unresolved / root cause unclear	Test permissions, OS/browser and supported hardware systematically.
Phone–TV interaction	Unresolved	Investigate pairing/session architecture and competing connections.
Network/session continuity	Workaround available	Consider session persistence after temporary network loss.
Notifications during teaching	UX issue unresolved	Notifications should not obscure teaching content; teacher dismissal/control needs review.

3. Developer Review Priorities

Priority 1 – Device / OS compatibility. Establish an explicit compatibility matrix covering Android versions, non-Android devices, TV operating systems/browsers, camera access, file selection and media playback. Reproduce the 13 September failures on the affected device classes.

Priority 2 – TV/media integration. Investigate why some devices can display lesson slides but cannot play YouTube/video content, why manual URLs do not necessarily solve playback, and whether simultaneous phone/TV connections create session conflicts.

Priority 3 – Authentication/session persistence. Determine whether a temporary network interruption should force teacher re-authentication. If not required for security, preserve the authenticated session through short network outages.

Priority 4 – Classroom notifications. Review drop-off/pick-up notification behaviour during an active teaching session. Notifications should not cover lesson content, and the appropriate teacher-level dismissal/control should be unambiguous.

Priority 5 – UAT closure discipline. Do not mark an issue “resolved” merely because a workaround exists. Closure should require reproducible evidence: affected device/version, reproduction steps, fix/version, retest result and date of confirmation.

4. Recommended UAT Closure Fields

Issue ID	Owner	Priority	Affected device/OS	Reproduction steps	Root cause confirmed?	Fix/version	Retest result	Closure status	Closure date

UAT-__	Developer / Support	High/Med/Low						Open / Workaround / Resolved	

Overall UAT conclusion: Shepherd Connect's core teaching workflow is demonstrably functional in a successful configuration. However, the UAT record does not yet justify treating the classroom experience as uniformly stable across the full range of devices and operating systems in use. The next phase should therefore focus on **reproducibility, device/OS compatibility, media integration, session resilience and classroom UX**, with each issue closed only against objective retest evidence.

Source: WhatsApp Chat with JC App Onboarding, covering the UAT/onboarding discussion reviewed for this report. This report records the evidence available in the chat and flags items where the chat does not establish a definitive technical root cause.
